

## **Ericaceae and Bryophyte data processing project**

**T.H. Trinder-Smith, University of Cape Town**

A total of ±19 000 records will be captured. It can be guaranteed that these records will be of excellent quality (accuracy w.r.t. wording/translations and locality, and with the minimum of typographical errors). 1) Erica: ± 13,500 primary records, of which a certain number of difficult-to-identify taxa have recently been determined (E.G.H. Oliver) ii) Bryophytes: ± 5,500 primary records of South African Bryophytes, the majority of which have been confirmed/seen/determined by the expert taxonomist of the taxon (T.J.A. Hedderson).
